RESEARCH INTERESTS

My research focuses on **multimodal learning** for video, audio, and language understanding. I have developed methods for **multimodal reasoning**, **efficient multimodal learning**, and **generative multimodal modeling**, aiming to build scalable and generalizable multimodal models that advance multimodal question answering, video understanding, and audio-visual reasoning across complex real-world scenarios and dynamic environments. My GitHub repositories on multimodal large language models (MLLMs) have received 1.5k+ Stars ★.

High-Frequency Video-to-IMU Synthesis via Physics-Guided Simulation and Hybrid U-Net Refinement
Proposed PrimeIMU, a physics-guided video-to-IMU generation framework that fuses low-frequency kinematic cues from 3D video poses with physics-inspired simulated inertial initialization through a hybrid U-Net refinement module, effectively bridging the anatomical-inertial gap to produce high-fidelity, sensor-faithful IMU signals that generalize across activities, devices, and datasets, enabling synthetic-only training, cross-domain adaptation, and scalable deployment of wearable sensing models.

IMU2Reason: A Multimodal LLM for Safety-Aware Activity Understanding
Proposed MHIA-LM, a multimodal LLM trained on fused video and IMU representations, where spatiotemporal video embeddings from InternVideo2 and IMU motion features encoded by a PatchTST-based encoder are integrated through a multi-layer Gated Hierarchical Interaction module and mapped into the LLM token embedding space for instruction tuning, enabling fine-grained activity recognition and safety reasoning.
